YTF Exploration Consulting

- Play Review is anchored on the premise that there is an identifiable source rock kitchen known to support prospectivity within a targeted play. Hence, play review begins with the identification of a viable source rock kitchen capable of supporting the play. Every recommended play by YTF Exploration is tied to a known, working source rock kitchen. If there's no identifiable source rock kitchen for the play, then prospectivity within the play is zero, irrespective of whether there's DHI present or not. This is the foundation of a play based exploration approach.
